

WHAT IS CLAIMED IS:

1. A portable cellular phone having a housing, the improvement comprising an alarm system, a radio receiver and means for storing audio signals and images, said alarm system, radio receiver and storing means being mounted within said housing.
2. The cellular phone of claim 1 wherein said alarm system and said radio receiver is mounted on a single circuit board.
3. The cellular phone of claim 1 wherein said alarm system is mounted on a first circuit board and said radio receiver is mounted on a second circuit board.
4. The cellular phone of claim 1 wherein said radio receiver comprises AM and FM stereo receivers.
5. The cellular phone of claim 1 wherein said alarm system comprises sensors for detecting movement.
6. The cellular phone of claim 1 wherein said alarm system comprises a horn system.
7. A portable cellular phone having a housing, the improvement comprising an alarm system and means for storing audio signals and images, said alarm system and said storage means being mounted within said housing.
8. The cellular phone of claim 1 further including means for automatically dialing a telephone number and transmitting messages when activated.
9. The cellular phone of claim 7 further including means

for automatically dialing a telephone number and transmitting audio signals and stored images when activated.

10. The cellular phone of claim 1 further including battery means associated with said housing, said battery means supplying power to said alarm system, said radio receiver and said audio signal and image storage means.

11. The cellular phone of claim 7 further including battery means associated with said housing, said battery means supplying power to said alarm system and said audio signal and image storage means.

12. The cellular phone of claim 1 wherein said cellular phone has a keypad with a key associated therewith, a first depression of said key causing an alarm signal generated by said alarm system to be transmitted to a remote location, a second depression of said key causing stored audio signals and images to be transmitted to said remote location.

13. The cellular phone of claim 12 wherein said cellular phone has automatic dialers, depression of said ~~two-mode~~ key causing said automatic dialers to be activated whereby an alarm signal generated by said alarm system is transmitted to said remote location.

14. The cellular phone of claim 1 wherein said alarm system is selected from the group consisting of infrared, ultrasonic and motion sensors.

15. The cellular phone of claim 7 wherein said alarm system is selected from the group consisting of infrared, ultrasonic and

motion sensors.

16. The cellular phone of claim 1 further including means for enabling the stored audio signals and images to be detected by a device external to said cellular phone.

17. The cellular phone of claim 7 further including means for enabling the stored audio signals and images to be detected by a device external to said cellular phone.

18. The cellular phone of claim 7 wherein said means for storing enables telephone conversations between the cellular phone user and another to be recorded.

19. The cellular phone of claim 7 further including a receptacle formed on said housing, said receptacle enabling a television or personal computer to be coupled to said cellular phone so that the stored images can be viewed.
